Engineering in Medicine

Volume 12 1983

Author Index

Andrianne, Y. *In vivo* measurement of the mechanical properties of bone tissue. Preliminary results, 43

Barbenel, J.C. The application of optimization methods for the calculation of joint and muscle forces, 29
Barbiero, B. Biomechanical design of a total ankle prosthesis, 69
Bosma, R. Biomedical engineering at the University of Technology Twente, Enschede, The Netherlands, 205
Bourgois, R. *In vivo* measurement of the mechanical properties of bone tissue. Preliminary results, 43
Burny, F. *In vivo* measurement of the mechanical properties of bone tissue. Preliminary results, 43

Calderale, P.M.
Biomechanical design of a total ankle prosthesis, 69
The use of strain gauges for biometrics in Europe, 117
Chapman, J.A. Medical biophysics in Manchester, 155

Dall, D.M.
Modelling of the femoral load transfer in total hip replacement – a preliminary study, 61
A study of antero-posterior load transfer in total hip replacement using a modelling technique, 113
Dombrowski, E.T. Spinal fixator for the management of spinal injury (the mechanical rationale), 95
Donkerwolcke, M. *In vivo* measurements of the mechanical properties of bone tissue. Preliminary results, 43
Dowson, D.
A study of the wear characteristics of sliding pairs of high density polycrystalline aluminium oxide with particular reference to their use in total replacement human joints, 23
Surface geometry of the human ankle joint, 35
Patterns of education in medical engineering. Introduction, 141
Education in bioengineering: experience at the University of Leeds, 151
Patterns of education in medical engineering – international reports. Introduction, 199

Evans, J.H. The load bearing capacity of vertebral cancellous bone in interbody fusion of the human spine, 183

Farrell, P.C. Biomedical engineering teaching and research at the Centre for Biomedical Research, University of New South Wales, Kensington, Australia, 201
Fasolio, G. Biomechanical design of a total ankle prosthesis, 69
Fisher, J. The variability of handgrip measurements, 47
Flicker, W. Biomedical teaching and research at the Centre for Biomedical Engineering, University of New South Wales, Kensington, Australia, 201
Fujikawa, K.
Biomechanics of the patello-femoral joint. Part I: a study of the contact and the congruity of the patello-femoral compartment and movement of the patella, 3
Biomechanics of the patello-femoral joint. Part II: a study of the effect of simulated femoro-tibial varus deformity on the congruity of the patello-femoral compartment and movement of the patella, 13

Garro, A. Biomechanical design of a total ankle prosthesis, 69
Gentle, C. R. Biomedical engineering at Trent Polytechnic, 163
Ghista, D. N. Spinal fixator for the management of spinal injury (the mechanical rationale), 95
Gillespie, the late Dr F.C. Variability of handgrip measurements, 47
Goode, J.D. Voluntary and diurnal variations in height and associated surface contour changes in spinal curves, 99
Greene, D. A new approach to the fixation of a metacarpophalangeal joint prosthesis, 135

Harding, N.G.L. Wound healing, 103
Hughes, S. Biomedical engineering training in Dundee, 145
Huiskes, R. A new approach to the fixation of a metacarpophalangeal joint prosthesis, 135
Hukins, D.W.L.
Functional differentiation of the spine, 83
Medical biophysics in Manchester, 155

Hvid, I.
The stability of the human patello-femoral joint, 55
Mechanical strength of the tibial resection surface in total knee replacement, 173

Jackson, M.I.V. Instrumentation for the analysis of continuous neck rotation, 91
Jensen, J. Mechanical strength of the tibial resection surface in total knee replacement, 173
Jones, B.E. Instrumentation for the analysis of continuous neck rotation, 91

Klein, J.A. Functional differentiation of the spine, 83
Kourinka, I.A.A. The effect of inertial forces on spinal stress when lifting, 87

Leskinen, T.P.J. The effect of inertial factors on spinal stress when lifting, 87

Mason, E.A. Medical engineering: meetings on research priorities, 143
McClelleand, B.F. Modelling of the femoral load transfer in total hip replacement – a preliminary study, 61
Medley, J.B. Surface geometry of the human ankle joint, 35
Miles, A.W.
Modelling of the femoral load transfer in total hip replacement – a preliminary study, 61
A study of antero-posterior load transfer in total hip replacement using a modelling technique, 113
Milner, J.B. A practical dropfoot brace, 65
Murphy, C. Instrumentation for the analysis of continuous neck rotation, 91

Nunamaker, D. A new approach to the fixation of a metacarpophalangeal joint prosthesis, 135

O'Brien, J.P. The load bearing capacity of vertebral cancellous bone in interbody fusion of the human spine, 183

Panic, B. Ten years experience with test criteria for fracture-proof anchorage stems for artificial hip joints, 185

Parchinski, T. A new approach to the fixation of a metacarpophalangeal joint prosthesis, 135
Paul, J.P. The Masters degree in bioengineering at the University of Strathclyde, 157
Pearcy, M.J. The load bearing capacity of vertebral cancellous bone in interbody fusion of the human spine, 183
Pipino, F. Biomechanical design of a total ankle prosthesis, 69

Troup, J.D.G. The effect of inertial forces on spinal stress when lifting, 87

Unsworth, A. Bioengineering at Durham University, 149

Walker, P.S. A new approach to the fixation of a metacarpophalangeal joint prosthesis, 135
Wallbridge, N. A study of the wear characteristics of sliding pairs of high density polycrystalline aluminium oxide with particular reference to their use in total replacement human joints, 23
Williams, A.R. Medical biophysics in Manchester, 155
Wright, V.
Biomechanics of the patello-femoral joint. Part I: a study of the contact and the congruity of the patello-femoral compartment and movement of the patella, 3
Biomechanics of the patello-femoral joint. Part II: a study of the effect of simulated femoro-tibial varus deformity on the congruity of the patello-femoral compartment and movement of the patella, 13
Surface geometry of the human ankle joint, 35
Biomechanical aspects of the spine (conference report), 81
Education in bioengineering: experience at the University of Leeds, 151

Subject Index

Titles of papers are shown in bold type

Aeromicrobiologically clean zones, 215
Analgesia computer, 166
Anchorage stems, fracture proof, for artificial joints, 185
Ankle joints:
human, surface geometry of, 35
hydrodynamic lubrication of, 40
Ankle prosthesis, total, biomechanical design of, 69
Anti-surge devices for medical equipment, 166
Application of optimization methods for the calculation of joint and muscle forces, 29
Articular cartilage, properties of, 149
Artificial hip joint:
anchorage stems, 185
metallic implant materials, 185
Artificial joints:
lubrication of, 145
ankle, 69
metacarpophalangeal, 135
hip, *see* Artificial hip joint
Australia, biomedical engineering education in, 201

BARD, 168
Batricar electric vehicle:
poor weather hood for, 50
walking aid bracket for, 167
wheelchair carrier for, 167
Batri-trike, 167
Bioengineering at Durham University, 149
Bioengineering:
education in, at the University of Leeds, 151
Masters degree in, at the University of Strathclyde, 157
Biomechanical aspects of the spine (conference report), 81
Biomechanical design of a total ankle prosthesis, 69
Biomechanics of the patello-femoral joint. Part I: a study of the contact and congruity of the patello-femoral compartment and movement of the patella, 3
Biomechanics of the patello-femoral joint. Part II: a study of the effect of simulated femoro-tibial varus deformity on the congruity of the patello-femoral compartment and movement of the patella, 13
Biomedical engineering at Trent Polytechnic, 163
Biomedical engineering at the University of Technology Twente, Enschede, The Netherlands, 205
Biomedical engineering, education in, for Japanese engineering students, 211
Biomedical engineering teaching and research at the Centre for Biomedical Engineering, University of New South Wales, Kensington, Australia, 201
Biomedical engineering training at Dundee, 145
Biomedical research in orthopaedics in Japan, 207
Biophysics, medical, in Manchester, 155
Blood glucose meter, digital, 107
Body supports, vacuum controlled, 216
Bone tissue, mechanical properties of, 43, 173, 183
Braille listing of IMechE conferences, 49

Cancellous bone:
tibial, strength of, 173
vertebral, load bearing capacity and

ultimate compressive strength of, 183
Chairs, design of, for elderly and disabled, 168
Charnley, Sir John, 52, 215
prosthesis, 113
Commode chair, fold-away, 168
Continuous neck rotation:
instrument for analysis of, 91
clinical aspects of, 93
Couplings, plastic, for use on medical equipment, 108
Cryoanalgesia, 217

Design Council Awards:
visual field analyser, 165
portable syringe driver, 165
blood glucose monitor, 165
suspended bed, 165
Directory of Schools of Medicine and Nursing, 165
Dressings, transparent, 50
Dropfoot brace:
kinematic suitability, 65
description of, 65
Dundee, biomedical engineering training in, 145
Durham University, bioengineering at, 149
Education in bioengineering: experience at the University of Leeds, 151
Education in the field of biomedical engineering for Japanese engineering students, 211
Effect of inertial forces on spinal stress when lifting, 87
Elbow joint, measurement and analysis of movement in, 149
Electrocardiograph, automatic, 109
Electromyograph, portable, 166

Femoral load transfer, modelling of, in total hip replacement, 61
Femoral prosthesis:
loosening of, 61
mechanical failure of, 61
standardization, 197
static and dynamic testing of, 186
Femoral trochlea:
angles of, 4, 7
contact areas on, 7
Freelancer, 107
Functional differentiation of the spine, 83
Ground reaction forces during human standing, 177
Ground reaction forces:
in sitting postures, 178
in standing postures, 178

Hand function, quantification of, 150
Handgrip measurements, variability of, 47
Hay fever and other allergies, diagnosis of, 215
HDAC (High density aluminium ceramics):
as prosthetic material, 23
friction measurement, 25
in relation to total replacement joints, 27
preparation of wear surfaces for testing, 24
wear characteristics of, under dry conditions, 26
wear characteristics of, under wet (distilled water) conditions, 27
wear debris, 25, 27
High density polycrystalline aluminium oxide, 23
Hip joint, measurement and analysis of movement in, 149
artificial, 185
Human ankle joint, surface geometry of, 35
Human joints:
lubrication of, 149
stiffness in, 150

Image analysis and formation, 155
IMechE conferences, braille listing of, 49
Implant materials, metallic:
chemical composition and microstructure, 185
mechanical properties, 186
In vivo measurement of the mechanical properties of bone tissue. Preliminary results, 43
Instrumentation for the analysis of continuous neck rotation, 91
Insulin pump, 49
Interbody fusion, of the human spine, 183

Japan:
biomedical research in orthopaedics in, 207
education in biomedical engineering in, 211
Joints:
ankle, 35, 40
elbow, 149
hip, 61, 113, 149, 185
knee, 3, 13, 55, 149, 173
temporo-mandibular, 30
Joint and muscle forces, calculation of, 29
Joint diseases, crystal induced, 215

Knee joints; *see* Joints: knee

Laser for microsurgery on eyes, 49
Leeds, University of, education in bioengineering at, 151
Lion car, 167
Load bearing capacity of vertegral cancellous bone in interbody fusion of the human spine, 183
Load transfer, antero-posterior, in total hip replacement, 61, 113
Lubrication:
of artificial joints, 149
of human joints, 149

Manchester, medical biophysics in, 155
Masters degree in bioengineering at the University of Strathclyde, 157
Mastication, muscles of, 30
MCP joint prosthesis:
animal studies, 136, 137
design, 135
finite element analysis, 136, 139
fixation of, 135
Mechanical strength of the tibial resection surface in total knee replacement, 173
Medical engineering, education in, 141 *et seq.*, 199 *et seq.*
Medical engineering: meetings on research priorities, 143
Medical equipment, electric motors for, 216
Medical biophysics in Manchester, 155
Metacarpophalangeal joint prosthesis, *see* MCP joint prosthesis
Microscope manipulator, counterbalanced, 165
Microsurgery on eyes, laser for, 49
Miniature tubes, 49
Modelling of the femoral load transfer in total hip joint replacement – a preliminary study, 61
Muscle forces, minimum, in temporo-mandibular joint, 31

Neck rotation, continuous, 91
Netherlands, biomedical engineering in, 205
New approach to the fixation of a metacarpophalangeal joint prosthesis, 135
New South Wales, University of, Centre for Biomedical Engineering, 201

Operating theatres, sterile enclosures for, 107
Orthopaedic biomechanics in Japan:
research in, 207
conferences on, 209
Osteoarthrosis, 19

Patella:
contact areas on, 6
facets, 7
movement of, 5, 9, 17, 19
surface configuration, 3
tilt of, 9
Patello-femoral articulation:
contact in, 4, 14
congruity of, 4, 16
Patello-femoral joint:
biomechanics of, 3, 13, 56
functional anatomy of, 55
stability/instability of, 55
three dimensional analysis of, 55
Patterns of education in medical engineering. Introduction, 141
Patterns of education in medical engineering – international reports. Introduction, 199
Phototherapy apparatus, 217
Porch lift, for wheelchair users, 50
Positive grip walking sticks, 108
Practical dropfoot brace, 65
Present state of biomedical research in orthopaedics in Japan – an observation by an orthopaedic surgeon, 207

Q angle, 55

Radiological physics (book review), 170
Radiotherapy shells, 49

Skull, ultrasonic examination of, 107
Sodium – potassium analyser, 166
Spinal column:
  axial compression of, 83
  bending of, 84
  energy dissipation of, 84
  fracture of, 84
  torsion of, 83
Spinal curves, associated height variations, 99
Spinal fixator:
  biomedical tests, 96
  clinical experience, 96
Spinal fixator for the management of spinal injury (the mechanical rationale), 95
Spinal injury, fixator for the management of, 95
Spinal stress, effect of inertial factors, 87
Spine:
  report of conference on biomechanical aspects of, 81
  funtional differentiation of, 83
Stability of the human patello-femoral joint, 55
Standing, human, 177
Sterile enclosures for operating theatres, 107
Strain gauges, use of:
  in dentistry, 129
  in orthopaedics, 117
  in sporting activities, 130
Strathclyde, University of, the Masters degree in bioengineering at, 157
Study of antero-posterior load transfer in total hip replacement using a modelling technique, 113
Study of the wear characteristics of sliding pairs of high density polycrystalline aluminium oxide with particular reference to their use in total replacement human joints, 23
Surface geometry of the human ankle joint, 35

Talus, 35, 73
  finite element model of, 72
  stress analysis of, 73
Tegaderm, 50
Temporo-mandibular joint:
  anatomy of, 30
  forces acting on, 30
Ten years of experience with test criteria for fracture-proof anchorage stems for artificial hip joints, 185
Theatre equipment, 217
Thermometer, digital, for skin temperature measurement, 166
Tibia, torsion in upper part of, 20, 21
Tibial resection, surface strength, 173
Total ankle prosthesis:
  functional and mechanical requirements, 77
  kinematics of, 69, 72
  loads acting on, 70
  stress analysis of, 73
Total hip replacement, antero-posterior femoral load transfer in, 61, 113
Total knee replacement, 173
Transcutaneous nerve stimulation, 108
Trent polytechnic, biomedical engineering at, 163
Twente, University of Technology, 205

Use of strain gauges for biometrics in Europe, 117

Variability of handgrip measurements, 47
Variations in height, voluntary and diurnal, 99
Varus deformity, 13 *et seq.*, 20
  treatment of, 3, 13
Voluntary and diurnal variations in height and associated surface contour changes in spinal curves, 99

Wheelchair:
  access to vehicles, 107
  heavy-duty, 215
  porch lift for, 50
  powered, 50, 168
Wound healing, 103

Xeroradiography, 166
